1. Engine Won't Start

This is a frequent issue that can arise due to several reasons:

- Check Fuel Supply: Ensure that there is sufficient fuel in the tank and that the fuel line is not clogged.
- Inspect the Battery: A dead or weak battery can prevent the engine from starting. Check the battery voltage and connections.
- Examine the Ignition System: Faulty spark plugs or ignition coils can be the culprit. Replace them if necessary.

2. Overheating

Overheating can lead to severe engine damage if not addressed promptly. Common causes include:

- Clogged Water Intake: Debris can block the water intake. Inspect and clean the intake screen.
- Malfunctioning Thermostat: If the thermostat is stuck closed, it may need replacement.
- Low Coolant Levels: Ensure that the cooling system has the correct coolant levels.

3. Poor Performance

If the engine is not performing as expected, consider the following:

- Inspect the Propeller: A damaged or improperly sized propeller can affect performance. Inspect for dings or bends and replace if needed.
- Fuel Quality: Poor-quality fuel can cause performance issues. Use fresh, high-quality fuel and consider adding fuel stabilizer.
- Air Filter Maintenance: A dirty air filter can restrict airflow. Clean or replace as needed.
