- Number Lines: Utilizing number lines can also support students in visualizing the multiplication process.

2. Breaking Down Numbers

- Partial Products: Teach students to break down the numbers into tens and ones. For example, for the problem 23×45 :
 - Break 23 into 20 and 3.
 - Break 45 into 40 and 5.
 - Calculate the partial products:
 - $20 \times 40 = 800$
 - $20 \times 5 = 100$
 - $3 \times 40 = 1200$
 - $3 \times 5 = 15$
 - Add the partial products together.
- Distributive Property: Use the distributive property to show how multiplication can be distributed over addition, making calculations easier.

3. Incorporating Technology

- Interactive Games: Utilize educational software and online games that focus on multiplication. These can make learning fun and engaging.
