Overview of the 2018 AP Chemistry Exam Format

The 2018 AP Chemistry exam consists of two main sections: multiple choice and free response. The multiple choice section is designed to assess a student's understanding of fundamental chemistry concepts and their ability to apply these concepts in problem-solving scenarios. This section contains 60 questions, which must be completed within 90 minutes. Each question is crafted to evaluate various topics including chemical reactions, stoichiometry, thermodynamics, kinetics, and atomic structure. The multiple choice format challenges students to select the best answer among several options, requiring precision and a strong grasp of chemistry principles.

Proper familiarity with the exam format and timing is crucial for efficient test-taking and maximizing scores.

Structure of the Multiple Choice Section

The multiple choice section is divided into sets of questions that may be related or independent, covering a broad range of chemistry topics. Questions often involve interpreting data, analyzing chemical equations, and applying mathematical calculations. The section's design encourages critical thinking and quick recall of key concepts.

Scoring and Weight

The multiple choice section accounts for 50% of the total exam score. Each correct answer contributes equally, and there is no penalty for incorrect answers. This scoring system incentivizes students to attempt every question and use elimination strategies to improve their chances of selecting the correct answer.
