- Double-digit addition and subtraction without regrouping

- Mixed operations

2. Word Problems

Word problems help students apply addition and subtraction skills to real-world scenarios. These worksheets may include:

- Simple context problems (e.g., "If you have 5 apples and you buy 3 more, how many apples do you have in total?")
- Multi-step problems that require students to think critically and apply multiple operations to arrive at a solution.

3. Addition and Subtraction with Regrouping

As students progress, they encounter addition and subtraction problems that involve regrouping (also known as carrying or borrowing). Worksheets in this category provide practice with:

- Double-digit addition with regrouping (e.g., $27 + 48$)
- Double-digit subtraction with regrouping (e.g., $54 - 29$)

4. Timed Worksheets

Timed worksheets are designed to help students improve their speed and accuracy in addition and subtraction. These can include:

- Timed drills that present a series of addition and subtraction problems to solve within a set time frame.
- Competitions or challenges to stimulate engagement and motivation.
