- Rates: The concept of rates is introduced, including the understanding of unit rates.
- Proportional Relationships: Students explore proportional relationships through problems involving scaling and equivalent ratios.

2. The Number System

- Operations with Fractions: Students practice adding, subtracting, multiplying, and dividing fractions and mixed numbers.
- Operations with Decimals: Similar to fractions, students learn to perform operations with decimals, including addition, subtraction, multiplication, and division.
- Integer Operations: Introduction to positive and negative integers and operations involving them.

3. Expressions and Equations

- Algebraic Expressions: Students learn to write and evaluate expressions using variables.
- Equations and Inequalities: Understanding how to solve one-variable equations and inequalities is crucial at this stage.

- Understanding the Order of Operations: Students apply the order of operations (PEMDAS) in solving expressions.

4. Geometry

- Area and Perimeter: Students calculate the area and perimeter of various two-dimensional shapes, including triangles, rectangles, and parallelograms.
- Volume: Introduction to calculating the volume of three-dimensional shapes such as cubes and rectangular prisms.
- Coordinate Geometry: Students learn about the coordinate plane, plotting points, and interpreting the coordinates of a point.

5. Statistics and Probability

- Data Interpretation: Students learn to read and interpret different types of graphs, including line plots, bar graphs, and histograms.
- Measures of Central Tendency: Concepts such as mean, median, and mode are introduced for data analysis.
- Introduction to Probability: Basic probability concepts, including experimental and theoretical probability, are introduced.
