- Fractions and Decimals
- Ratios and Proportions
- Geometry
- Algebraic Expressions
- Measurement
- Data and Probability

2. Create Questions: Develop questions for each category, ensuring a range of difficulties. Here are examples of questions that could fit into each category:

- Fractions and Decimals
 - "What is $\frac{3}{4} + \frac{1}{2}$?"
 - "Convert 0.75 to a fraction."
- Ratios and Proportions
 - "If the ratio of cats to dogs is 2:3, how many dogs are there if there are 8 cats?"
 - "Solve for x in the proportion $\frac{5}{x} = \frac{10}{2}$."
- Geometry
 - "What is the area of a triangle with a base of 10 and a height of 5?"
 - "Name the three types of triangles based on side lengths."
- Algebraic Expressions
 - "Simplify the expression $3x + 2x - 4$."
 - "What is the value of x if $5x + 7 = 32$?"
- Measurement
 - "Convert 3 feet to inches."
 - "What is the perimeter of a rectangle with length 10 and width 5?"
- Data and Probability

- "What is the mean of the following set of numbers: 2, 4, 6, 8, 10?"
- "If you roll a die, what is the probability of rolling an even number?"

3. Point Values: Assign point values to each question, typically ranging from 100 to 500 points, depending on the difficulty.

4. Game Board: Create a visual game board. This could be a physical board in the classroom or a digital board using presentation software or online platforms.
