Early Life and Influences

Frank Lloyd Wright was born on June 8, 1867, in Richland Center, Wisconsin. His early life experiences significantly influenced his architectural philosophy. Here are some key points about his formative years:

- **Family Background:** Wright's father was a successful architect, which exposed him to design and construction from an early age. His mother's emphasis on education and aesthetics also played a crucial role in shaping his creative outlook.
- **Education:** Wright attended the University of Wisconsin-Madison, where he studied civil engineering. His formal education in architecture began when he moved to Chicago in the late 1880s, where he worked for the architectural firm of Adler & Sullivan.
- **Mentorship:** One of the most significant influences on Wright was his mentor, Louis Sullivan, often referred to as the "father of skyscrapers." Sullivan's philosophy that "form follows function" deeply resonated with Wright and laid the groundwork for his future innovations.

Architectural Philosophy

Frank Lloyd Wright's architectural philosophy can be summarized through several key principles that defined his work:

Organic Architecture

Wright believed that architecture should be in harmony with humanity and the environment. He coined the term "organic architecture," which encompasses the following concepts:

1. **Integration with Nature:** Structures should blend with their natural surroundings rather than dominate them. This idea is evident in his designs, where buildings often mimic natural forms or materials.
2. **Use of Local Materials:** Wright favored materials that were native to the building site, promoting sustainability and a sense of place.
3. **Flow of Space:** He emphasized open floor plans and spaces that encouraged movement and

interaction, rejecting traditional compartmentalization in design.

Prairie School Movement

Wright was a leading figure in the Prairie School movement, characterized by:

- Horizontal Lines: His designs often featured low, horizontal profiles that echoed the flat landscapes of the American Midwest.
- Flat Roofs: Buildings featured broad, flat roofs with overhanging eaves, creating a sense of shelter and connection to the ground.
- Natural Colors: Wright utilized earthy tones and natural materials to create a seamless transition between the indoor and outdoor environments.
