Sample Accounts Payable Test Questions and Answers

Below are some representative accounts payable test questions along with detailed answers to illustrate the type of knowledge assessed and how to respond accurately.

Question 1: What is the purpose of a three-way match in accounts payable?

Answer: The three-way match is a control process used to verify that the purchase order, receiving report, and supplier invoice all correspond before payment is approved. This ensures that the goods or services billed were actually ordered and received, preventing overpayments and fraud.

Question 2: How should an invoice be handled if the amount differs from the purchase order?

Answer: If an invoice amount differs from the purchase order, the discrepancy should be investigated by contacting the vendor or the purchasing department. Payment should be withheld until the issue is resolved to avoid overpayment or payment for unauthorized goods or services.

Question 3: What are common payment terms, and why are they important?

Answer: Common payment terms include “Net 30,” meaning payment is due within 30 days, and discounts such as “2/10 Net 30,” which offers a 2% discount if paid within 10 days. Understanding payment terms helps companies manage cash flow effectively and take advantage of discounts.

Question 4: Describe the steps involved in processing an accounts payable invoice.

Answer: The typical steps include:

1. Receive and verify the invoice against the purchase order and receiving report (three-way match).
2. Enter the invoice details into the accounting system.
3. Obtain necessary approvals for payment.
4. Schedule the payment based on terms.
5. Execute payment and record it in the system.
6. File the invoice and payment documentation for records.

Question 5: What internal controls can help prevent fraud in accounts

payable?

Answer: Internal controls include segregation of duties, requiring approval for payments, regular reconciliation of accounts, vendor verification processes, and secure handling of check issuance or electronic payments. These controls reduce the risk of unauthorized or fraudulent transactions.
