Exam Structure and Scoring

The AP environmental science exam assesses students' knowledge and ability to apply scientific principles to environmental problems. The exam consists of two main sections: multiple-choice questions and free-response questions. Together, these evaluate content mastery, data analysis skills, and critical thinking.

Multiple-Choice Section

This section contains approximately 80 questions covering all major topics within the curriculum. Questions test students' understanding of scientific concepts, interpretation of graphical data, and application of environmental laws and policies. It accounts for 60% of the overall exam score.

Free-Response Section

The free-response section includes several questions that require written explanations, data analysis, and synthesis of information. Students may be asked to design experiments, evaluate environmental case studies, or propose solutions to environmental issues. This section accounts for 40% of the total score.

Scoring and AP Credit

Scores range from 1 to 5, with a score of 3 or higher generally considered passing and eligible for college credit or advanced placement. The exam emphasizes both content knowledge and the ability to think critically about environmental science topics.
