The Game Mechanics

Before diving into the nitty-gritty of customization and combat, it's crucial to understand the basic mechanics of the game:

- **Movement:** Players control their AC using a combination of movement controls, including walking, boosting, and flying. Mastering movement is essential for dodging attacks and positioning yourself effectively in combat.

Customization: Building Your Armored Core

One of the standout features of Armored Core 4 is the extensive customization options available to players. Customizing your AC can significantly impact your performance in battle.

Choosing the Right Parts

When building your AC, consider the following parts:

1. Chassis: This is the core structure of your AC. There are different types of chassis, each suited for specific playstyles. For example:
 - Heavyweight: Offers high defense but limited mobility.
 - Lightweight: Provides superior speed and agility but has lower defense.
2. Arms: The arms of your AC determine the types of weapons you can equip. Choose arms that complement your overall build and playstyle.
3. Legs: Legs affect your movement speed, jump height, and stability. Different leg types include bipedal, quadrupedal, and hover, each with its advantages.
4. Weapons: Select weapons that suit your combat strategy. Options include:
 - Ranged Weapons: Great for keeping distance from enemies.
 - Melee Weapons: Effective in close combat situations.
5. Core: The core part of your AC determines energy efficiency and stability. A good core can enhance your overall performance.

Balancing Your Build

When customizing your AC, it's essential to strike a balance between offense, defense, and mobility. Here are some tips:

- Weight Management: Every part you equip adds weight to your AC. Be mindful of your weight limit to maintain agility.
- Energy Efficiency: Ensure your build allows for sustainable energy usage, especially during extended battles.
- Playstyle Adaptation: Tailor your AC to your preferred playstyle, whether you prefer aggressive, defensive, or balanced approaches.

Combat Strategies

Mastering combat in Armored Core 4 requires a combination of quick reflexes, strategic thinking, and effective use of your AC's capabilities.

Understanding Enemy Types

Different enemies have unique behaviors and weaknesses. Familiarize yourself with the following enemy types:

- Standard ACs: These are your typical opponents. They may vary in speed and armament.

- Heavy Units: These foes are slow but possess immense firepower. Use speed to your advantage.
- Support Drones: Often seen in missions, these enemies provide backup to tougher foes. Prioritize them to reduce incoming fire.

Effective Combat Techniques

Here are some essential techniques to improve your combat effectiveness:
