Installation of Automated Logic Thermostats

Proper installation is crucial for the optimal performance of your automated logic thermostat. Here's a step-by-step guide to help you through the installation process.

Tools and Materials Needed

- Screwdriver (flat-head and Phillips)
- Drill (if necessary)
- Level

- Wire stripper
- Thermostat mounting hardware (included with the thermostat)
- User manual

Step-by-Step Installation Process

1. Turn Off Power: Before beginning the installation, turn off the power to your HVAC system at the circuit breaker to prevent any electrical hazards.
2. Remove the Old Thermostat: Carefully take down your existing thermostat by unscrewing it from the wall. Disconnect the wires, noting their connections (you may take a photo for reference).
3. Prepare the Wall: If necessary, patch any holes left by the old thermostat and ensure the wall surface is suitable for mounting the new one.
4. Mount the New Thermostat: Follow the manufacturer's instructions to mount the new thermostat. Use a level to ensure it's straight.
5. Connect the Wires: Strip the ends of the wires if needed and connect them to the corresponding terminals on the new thermostat (refer to the manual for proper wiring).
6. Attach the Faceplate: Once the wires are connected, attach the thermostat's faceplate securely to the mounted base.
7. Restore Power: Turn the power back on at the circuit breaker and test the thermostat.

Programming Your Automated Logic Thermostat

Programming your automated logic thermostat is essential for maximizing its benefits. Below are the general steps to help you through the programming process.

Initial Setup

1. Turn on the Thermostat: After installation, power up your thermostat and follow the on-screen prompts.
2. Select Your Language: Choose the language you prefer for the display.
3. Set the Date and Time: Input the current date and time, which is important for scheduling.

Creating a Temperature Schedule

1. Access the Scheduling Menu: Navigate to the scheduling section in the thermostat's interface.
2. Define Your Time Blocks: Create time blocks for each day of the week. For instance:
 - Weekdays:
 - 6:00 AM - 8:00 AM: 68°F (Heating)
 - 8:00 AM - 5:00 PM: 62°F (Energy-saving)
 - 5:00 PM - 10:00 PM: 68°F (Heating)

- 10:00 PM - 6:00 AM: 62°F (Energy-saving)
 - Weekends:
 - 7:00 AM - 10:00 AM: 70°F (Heating)
 - 10:00 AM - 10:00 PM: 68°F (Heating)
 - 10:00 PM - 7:00 AM: 62°F (Energy-saving)
3. Adjust Temperature Settings: Customize the temperature settings for each time block as needed.
 4. Save Your Schedule: Ensure to save the schedule once completed.
