Curriculum Structure

The Beta Math U See curriculum is organized into a series of lessons, each designed to introduce new concepts gradually while reinforcing previously learned material. Here are the main components of the curriculum:

1. Lessons: Each lesson introduces a new mathematical concept and includes a video instruction by Steve Demme. The lessons are designed to be engaging and easy to follow, allowing students to learn at their own pace.
2. Workbook: The accompanying workbook provides practice problems that reinforce the concepts taught in the lessons. Students work through a variety of problems, ensuring they have a solid understanding of each topic.
3. Manipulatives: Math U See places a strong emphasis on the use of

manipulatives—physical objects that students can use to visualize and interact with mathematical concepts. The Beta level includes a set of blocks that represent numbers, enabling students to grasp the concept of multiplication and division visually.

4. Tests and Assessments: Regular quizzes and assessments are integrated into the curriculum, allowing both students and parents to track progress and identify areas that may need additional focus.

Key Concepts Covered in Beta Math U See

The Beta Math U See curriculum covers a wide range of essential mathematical concepts. Here are some of the key areas of focus:

- **Multiplication and Division:** Students learn multiplication as repeated addition and are introduced to division as the inverse operation. The curriculum emphasizes understanding the relationship between these two operations.
- **Fractions:** Students explore the concept of fractions, including how to compare, add, and subtract them. Visual aids and manipulatives help students understand the concept of parts of a whole.
- **Geometry:** Basic geometry concepts are introduced, including recognizing shapes, understanding properties of geometric figures, and the fundamentals of measuring area and perimeter.
- **Decimals:** The introduction of decimals helps students understand place value in a new way, bridging the gap between whole numbers and fractions.
