Maintenance of the Bissell Symphony Pet

Regular maintenance of your Bissell Symphony Pet is crucial for ensuring its longevity and optimal performance. Follow these guidelines to keep your appliance in top shape.

Cleaning the Microfiber Pads

The microfiber pads collect dirt and grime, so it's important to wash them regularly to maintain cleaning efficiency. Here's how to care for them:

- Remove the Pads: After each use, detach the pads from the cleaning head.
- Washing: Wash them in cold water with mild detergent. Avoid using bleach or fabric softeners as they can damage the pads.
- Drying: Air dry the pads completely before reattaching them to the device.

Cleaning the Dirt Tank

The dirt tank needs to be emptied and cleaned regularly to ensure proper suction power.

- Emptying the Tank: After each use, press the release button to detach the dirt tank. Empty the contents into the trash.
- Cleaning the Tank: Rinse the tank with warm water. Do not submerge it completely in water, as this can damage internal components.

Checking for Blockages

To maintain optimal suction, periodically check for blockages in the vacuum hose and filters:

- Inspect the Hose: Look for any visible obstructions in the hose and remove them.
- Check Filters: Clean or replace the filters as indicated in the manual to prevent loss of suction.
