These worksheets serve as adjuncts to therapeutic sessions or self-help routines, providing a tangible way to address complex emotional issues surrounding body perception. They incorporate various psychological techniques, including cognitive-behavioral therapy (CBT), mindfulness, and self-compassion practices, to facilitate positive change. The design of these worksheets encourages users to assess their current beliefs, identify distortions, and reframe negative self-talk.

The primary goal of body image therapy worksheets is to promote healthier relationships with one's body by addressing underlying cognitive and emotional patterns. They aim to:

- Increase awareness of negative body-related thoughts and triggers.
