1. Functions and Graphs

This initial section introduces students to the fundamental concepts of functions and their graphical representations. Students learn to:

1. Understand different types of functions (linear, polynomial, exponential, etc.).
2. Analyze and interpret graphs to extract information about functions.
3. Utilize graphical tools to solve problems.

2. Limits and Continuity

Limits form the cornerstone of calculus. In this section, students explore:

- The concept of a limit and how it relates to function behavior.
- Techniques for calculating limits, including graphical and numerical approaches.
- The importance of continuity in functions and its implications for calculus.

3. Derivatives

The derivative represents the rate of change and is a key concept in calculus. This chapter covers:

1. The definition of a derivative and its geometric interpretation as a tangent line.
2. Rules for differentiation, including the product, quotient, and chain rules.
3. Applications of derivatives in optimization problems and motion analysis.

4. Applications of Derivatives

This section delves into practical uses of derivatives, demonstrating how they can be applied in various fields:

- Finding maxima and minima (optimization).
- Understanding rates of change in economics and business contexts.
- Using derivatives to analyze graphs and understand function behavior.

5. Integrals

The concept of integration is introduced as the inverse operation of differentiation. Key topics include:

1. Understanding the definite and indefinite integrals.
2. Techniques for calculating integrals, including substitution and integration by parts.
3. Applications of integrals in calculating areas and solving problems in physics and engineering.

6. Applications of Integrals

Similar to derivatives, integrals have numerous applications. In this section, students learn:

- How to calculate areas under curves and between curves.
- Applications in business, such as consumer and producer surplus.
- Using integrals to solve problems in physics, like finding displacement from velocity.
