

can i use hyaluronic acid after the ordinary peeling solution

Can I use hyaluronic acid after The Ordinary peeling solution? This question is often posed by skincare enthusiasts who wish to maximize the benefits of their skincare routine. The Ordinary's peeling solution, known for its potent exfoliating properties, has gained immense popularity for its ability to brighten skin and improve texture. However, concerns about how to layer products effectively, particularly with ingredients like hyaluronic acid, are common. In this article, we will explore the role of hyaluronic acid, the function of The Ordinary's peeling solution, and how to safely incorporate them into your skincare routine.

Understanding The Ordinary Peeling Solution

The Ordinary offers a range of chemical exfoliants, with their AHA 30% + BHA 2% Peeling Solution being one of the most notable. This solution is designed to provide deep exfoliation for improved skin texture and clarity. Here's a breakdown of its key components:

- **AHA (Alpha Hydroxy Acid):** These are water-soluble acids derived from fruits that help to exfoliate the surface of the skin, removing dead skin cells and promoting cell turnover.
- **BHA (Beta Hydroxy Acid):** Unlike AHAs, BHAs are oil-soluble and penetrate deeper into the pores to dissolve excess oil and prevent acne.
- **Other Ingredients:** The formula includes soothing agents like Tasmanian pepperberry to reduce irritation and provide a more balanced exfoliation experience.

The peeling solution is typically used once a week for about 10 minutes, making it a powerful tool for achieving brighter and smoother skin. However, because of its potency, it can also lead to sensitivity or irritation if not used properly.

The Role of Hyaluronic Acid

Hyaluronic acid (HA) is a naturally occurring substance in the body, primarily known for its extraordinary ability to retain moisture. It can hold up to 1,000 times its weight in water, making it an essential ingredient in many skincare products. Here's why it's so beneficial:

- **Hydration:** HA helps to keep the skin hydrated, plump, and youthful by attracting moisture to the skin's surface.
- **Soothing Properties:** It can help to soothe irritation and redness, making it a great addition to

post-exfoliation skincare.

- **Compatibility:** Hyaluronic acid is compatible with most skincare products and layers well with various active ingredients.

Given its hydrating and soothing properties, many people wonder if they can use hyaluronic acid after applying The Ordinary peeling solution.

Can You Use Hyaluronic Acid After The Ordinary Peeling Solution?

Yes, you can use hyaluronic acid after The Ordinary peeling solution, and it is often recommended. Here's why:

1. Hydration Post-Exfoliation

After using a strong exfoliant like The Ordinary peeling solution, your skin may feel dry or tight. Applying hyaluronic acid can help replenish moisture and restore the skin barrier, providing relief from potential dryness or irritation.

2. Reducing Sensitivity

Since chemical peels can increase skin sensitivity, hyaluronic acid's soothing properties can help mitigate discomfort. By providing hydration, HA can help calm the skin and reduce the chances of redness and irritation.

3. Enhancing Absorption

Hyaluronic acid can enhance the absorption of other products applied after the peeling solution. It acts as a humectant, drawing moisture into the skin, which can help other active ingredients penetrate more effectively.

How to Incorporate Hyaluronic Acid in Your Routine

To safely and effectively incorporate hyaluronic acid after using The Ordinary peeling solution, follow these guidelines:

1. **Cleanse Your Skin:** Start with a gentle cleanser to remove makeup and impurities.

2. **Apply The Ordinary Peeling Solution:** Follow the instructions for application, ensuring that you do not exceed the recommended time.
3. **Rinse Thoroughly:** After 10 minutes, rinse the peeling solution off with lukewarm water. Avoid using hot water as it can further irritate the skin.
4. **Pat Your Skin Dry:** Gently pat your skin dry with a clean towel, avoiding any rubbing or harsh motions.
5. **Apply Hyaluronic Acid:** While your skin is still slightly damp, apply a few drops of hyaluronic acid to help lock in moisture. Follow up with a moisturizer if desired.

Additional Tips for Using The Ordinary Peeling Solution and Hyaluronic Acid

To maximize the benefits of both products and minimize potential irritation, consider the following tips:

1. Patch Test

Before introducing new products into your routine, especially those with active ingredients, perform a patch test. Apply a small amount of the peeling solution and hyaluronic acid on a discreet area to ensure your skin reacts well.

2. Frequency of Use

Limit the use of The Ordinary peeling solution to once a week, especially if you have sensitive skin. Over-exfoliating can lead to damage and irritation. Use hyaluronic acid daily as needed to maintain hydration.

3. Choose the Right Formulation

Hyaluronic acid can be found in various formulations, including serums, creams, and gels. Choose a product that suits your skin type and concerns. Lightweight serums are often best for layering after exfoliation.

4. Avoid Combining with Strong Actives

After using the peeling solution, avoid layering other strong actives like retinol or additional acids

immediately. Give your skin time to recover before introducing other potent ingredients.

Conclusion

In conclusion, using hyaluronic acid after The Ordinary peeling solution is not only safe but also beneficial for your skin. The hydrating and soothing properties of hyaluronic acid can help restore moisture, reduce irritation, and enhance the overall effectiveness of your skincare routine. By following the proper application methods and being mindful of your skin's needs, you can achieve a radiant and healthy complexion. Always remember to listen to your skin and adjust your routine accordingly for the best results.

Frequently Asked Questions

Can I use hyaluronic acid immediately after The Ordinary peeling solution?

Yes, you can use hyaluronic acid immediately after The Ordinary peeling solution to help hydrate and soothe your skin.

What benefits does hyaluronic acid provide after using The Ordinary peeling solution?

Hyaluronic acid helps to replenish moisture, improve skin texture, and enhance the overall hydration of the skin after exfoliation.
