Progressing through levels demands gathering various metals, stones, and reagents commonly found throughout Outland and classic zones. Skill advancement is based on crafting items and learning new recipes from trainers, vendors, and drops.

Leveling Engineering Efficiently

Leveling Engineering efficiently in Classic TBC involves a strategic approach to maximize skill gains while minimizing resource waste. Since some items confer more skill points than others, prioritizing the right recipes is essential. This section outlines the best methods and items to craft at each skill bracket to level from 1 to 375.

Starting Out: 1 to 75

Begin by crafting basic items such as Rough Blasting Powder and Simple Wood. These items are inexpensive and provide steady skill increases. Early mining to collect Copper and Tin will supply the necessary materials at minimal cost.

Mid-Level Crafting: 75 to 225

Transition to crafting items like Coarse Blasting Powder, Bronze Tubes, and Solid Blasting Powder. This phase benefits from mining and purchasing ores such as Bronze and Iron. Farming mobs that drop additional engineering parts will speed up progression.

Advanced Crafting: 225 to 300

At this stage, focus on recipes including Heavy Blasting Powder, Thorium Widgets, and various explosive devices. These recipes become available from trainers and vendors in Outland and require more rare materials. Efficiently farming or purchasing these components is key to smooth leveling.

Mastering Engineering: 300 to 375

The final leveling phase in TBC Engineering involves crafting intricate items like Felsteel Stabilizers, Adamantite Grenades, and powerful scopes. Many recipes require reputation with factions such as the Honor Hold or Thrallmar. Planning reputation grinding alongside material gathering will optimize your skill-up rate.
