Definition of Compound Words

Compound words are formed when two or more words are joined together to create a new word with a unique meaning. For example, the words "tooth" and "brush" combine to form "toothbrush." This combination can serve to enrich vocabulary and enhance comprehension skills.

Types of Compound Words

There are three primary types of compound words:

1. Closed Compound Words: These are written as a single word, such as "notebook" or "sunflower."
2. Hyphenated Compound Words: These consist of two words connected by a hyphen, like "mother-in-law" or "check-in."
3. Open Compound Words: These are two separate words that work together to convey a single idea, for example, "ice cream" or "swimming pool."

Understanding these types helps students recognize how compound words function within the English language.

Afterward, students can illustrate their new compound words.
