Understanding Bloxorz

Bloxorz is a game that requires players to manipulate a rectangular block across a grid-like board. The primary goal is to tip the block into a hole by maneuvering it over various tiles while avoiding pitfalls and other obstacles. The game is simple in concept but becomes increasingly complex as players progress through the levels.

Game Mechanics

1. Movement: Players can move the block in four directions: up, down, left, and right. The movement is not just straightforward; it is influenced by how the block is positioned on the tiles.
2. Tipping: The block can tip over when it moves to the edge of a tile. This mechanic is crucial for navigating the board, as players must plan their moves carefully to avoid falling off.
3. Tiles: The game features different types of tiles, each with unique properties:
 - Normal Tiles: Standard tiles that the block can move across without any special effects.
 - Hinge Tiles: Tiles that can be tipped to create bridges or gaps.
 - Moveable Tiles: Certain tiles can shift positions when the block moves, adding another layer of complexity.
 - Void Tiles: Areas of the board that result in instant failure if the block lands on them.
