Solutions to Common Problems

In the realm of cost accounting, students often encounter various problems that require analytical thinking and application of theoretical concepts. The solutions manual for Horngren's 13th edition serves as a valuable guide for these problems. Here, we discuss some common types of problems and their solutions.

1. Job Order Costing

Problem: Calculate the total cost of a job that consists of direct materials, direct labor, and applied overhead.

Solution:

- Direct Materials: \$5,000
- Direct Labor: \$3,000
- Overhead Rate: 150% of Direct Labor
- Applied Overhead = $150\% \times \$3,000 = \$4,500$
- Total Cost = Direct Materials + Direct Labor + Applied Overhead
- Total Cost = $\$5,000 + \$3,000 + \$4,500 = \$12,500$

2. Process Costing

Problem: Determine the cost per unit in a process costing system where total costs are \$20,000 and 5,000 units were produced.

Solution:

- Cost per Unit = Total Costs / Total Units Produced
- Cost per Unit = $\$20,000 / 5,000 = \4 per unit

3. Cost-Volume-Profit Analysis

Problem: A company sells a product for \$50 per unit, with fixed costs of \$100,000 and variable costs of \$30 per unit. Determine the break-even point in units.

Solution:

- Contribution Margin per Unit = Selling Price - Variable Costs
- Contribution Margin = $\$50 - \$30 = \$20$ per unit
- Break-Even Point (in units) = Fixed Costs / Contribution Margin per Unit
- Break-Even Point = $\$100,000 / \$20 = 5,000$ units

4. Budgeting

Problem: Create a flexible budget for a company that expects sales of 10,000 units at \$25 per unit, with variable costs of \$10 per unit and fixed costs of \$50,000.

Solution:

- Sales Revenue = Sales Price $\times$ Number of Units
- Sales Revenue = $\$25 \times 10,000 = \$250,000$
- Total Variable Costs = Variable Cost per Unit $\times$ Number of Units
- Total Variable Costs = $\$10 \times 10,000 = \$100,000$
- Total Costs = Total Variable Costs + Fixed Costs
- Total Costs = $\$100,000 + \$50,000 = \$150,000$
- Net Income = Sales Revenue - Total Costs
- Net Income = $\$250,000 - \$150,000 = \$100,000$
