- Subtest 1: Focuses on the principles of chemistry, including atomic structure, periodicity, bonding, and stoichiometry.
- Subtest 2: Emphasizes chemistry in action, examining chemical reactions, kinetics, thermodynamics, and equilibrium.
- Subtest 3: Tests your understanding of the laboratory practices, safety, and teaching methodologies relevant to chemistry.

Exam Format

The CSET Chemistry exam includes a combination of multiple-choice questions and constructed-response items. Understanding the format can help you manage your time effectively during the test.

- Multiple Choice: Typically comprises 60 questions, each worth one point, covering various chemistry topics.
- Constructed Response: Involves writing detailed answers to specific questions, demonstrating your analytical and pedagogical skills.
