Understanding Case Study Interviews

Case study interviews are designed to simulate real-world business problems that consultants face regularly. During these interviews, candidates are presented with a hypothetical scenario or a real case from the company's history and asked to analyze the situation, develop recommendations, and present their findings. This format allows interviewers to gauge a candidate's thought process, communication skills, and ability to think on their feet.

The Structure of a Case Study Interview

Typically, a case study interview will include the following components:

1. **Introduction:** The interviewer presents the case and outlines the objectives.
2. **Clarifying Questions:** Candidates are encouraged to ask questions to better understand the scenario.
3. **Analysis:** Candidates analyze the information provided, often using frameworks and models.
4. **Recommendations:** Candidates present their findings and actionable recommendations.
5. **Discussion:** Interviewers may ask follow-up questions to probe deeper into the candidate's thought process.
